

REEFER MONITOR

REEFER MANAGEMENT WITH N4
AT YOUR FINGERTIPS

Reefer Monitor is Navis' next gen mobile application that brings N4 and Master Terminal reefer management to your fingertips, enabling reefer clerks to monitor temperature, humidity, ventilation, and other conditions for temperature sensitive cargo. As part of the Navis Smart Mobile Suite, **Reefer Monitor** uses state-of-the-art mobile technology to provide an immersive mobile experience with a user interface specifically designed to give reefer technicians 24/7 visibility and control over reefer containers in the yard, even with poor connectivity. **Reefer Monitor** is also decoupled from N4 and Master Terminal allowing it to be updated seamlessly without impacting the core TOS.

Reefer Monitor **Features**

Instant
Deployment

Customized
Walk Paths

Day and
Night Views

Real-time
N4 and
Master Terminal
Updates

Offline Mode

Which Give You

Better user experience

Reefer Monitor's intuitive and user friendly interface, combined with Day and Night Mode lighting, provide a seamless experience for your reefer clerks. And you can customize reefer job lists to reflect the clerks work paths.

Continous updates to the latest innovations

Since Reefer Monitor is a standalone mobile application, you don't need to update the TOS to get feature updates. Initial deployment and ongoing updates are seamless via download, without impacting the TOS.

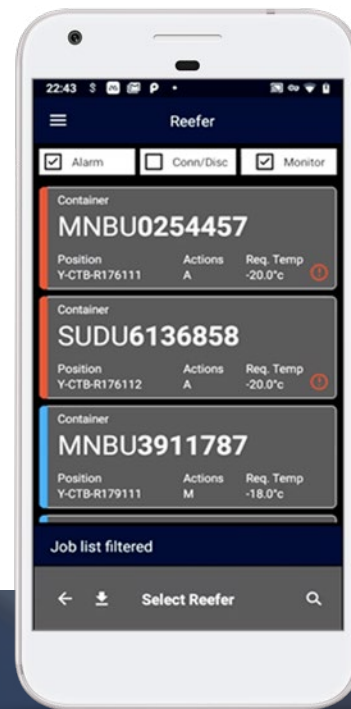

Continuous productivity when connectivity goes down

Offline Mode gives reefer clerks the ability to work uninterrupted even when WiFi is spotty or goes down.

Daytime Mode
